

**Option 1 - HP IPAQ 614 Mobile Smartphone Cradle  
(Excludes hands free speech option)**

New Small Cradle Design

**£54.99**  
(£64.61 Inc VAT)

**CMPC-106 MOBILE PDA CRADLE HP IPAQ 614 BUSINESS NAVIGATOR**

The main function of the Mobile PDA Cradle is to power and charge your PDA while your on the move, and hold it securely into it's position.

The Mobile PDA Cradle uses the original manufacturers cradle connector. By using this original cradle connector and by the perfect fit to the PDA, the PDA is protected in the best way possible.

Integrated inside the Mobile PDA Cradle, not in the cigarette lighter plug, is a high efficiency charging system which is only four square cm large.

The Mobile PDA Cradle has a single cable output which splits into a cigarette lighter plug which supplies the 12V/24V power to the Mobile PDA Cradle, and a PS/2 Female connector.

Standard this kit comes with an extra fuse cable to hard wire the Mobile PDA Cradle in your vehicle, 2 screws, a rotating swivel and a windowmount with suctioncup, to mount the cradle on the dashboard or on the windscreen of your vehicle.

**Key Features**

- slim design
- original PDA cradle connector
- perfect fit to the PDA
- dashboard color
- single cable output from the cradle
- high efficiency charging system
- prepared for permanent installation
- e4 approved

- ✓ Full Duplex Conversation / Handsfree Speaking
- ✓ DSP Voice Processor
- ✓ Echo Cancelling and Noise Reduction
- ✓ Ready to Connect to a GPS Receiver

**£139.00**  
(£163.33 Inc VAT)

**Description**

Keep your hands free and concentrate on driving while staying in touch and on the road with the Carcomm handsfree DSP carkit for the HP IPAQ 614.

The high performance DSP processor ensures the best echo cancelling, noise reduction and full duplex conversation. Inside the DSP unit is a mute box system, which disconnects the left front and both rear car radio speakers and takes over the right front speaker, muting the car radio automatically during a phone call or when navigation software issues a voice instruction.

Integrated in the DSP unit is a high efficiency charging system, which charges the PDA and can be used to power the ENAV Bluetooth GPS receivers. The cradle uses the manufacturer's original cradle connector, ensuring a perfect fit. It also has a single cable output that splits into a 15 pins SUB-D connector which is connected to the main unit, and a PS/2 Female connector. Additional cables to connect other systems and receivers are available on request.

As standard, this kit comes with the Hands Free DSP Unit, PDA Cradle, CSC-002 Rotating Swivel, CIPC-14 Power Cable, CHCM-14 Microphone and 2 screw sets.

**Summary of Features**
